FAST | SAFE | INNOVATIVE
PLUMBING SOLUTIONS

A REVOLUTIONARY NEW INSPECTION
AND TEST OPENING FOR SEWER
AND STORMWATER SYSTEMS

WWW.KVALVE.CO.UK

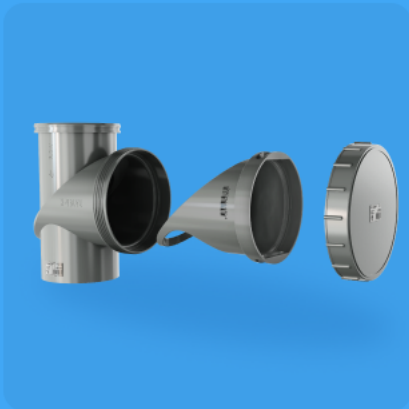

K-Valve is a safe and highly efficient testing and inspection device, strategically designed to streamline testing sewer and storm water systems used in all residential, commercial and industrial environments. The simplicity of the K-Valve design allows for easy install, using the multi-faceted product as the standard inspection and test opening, applying the separate test plug during the testing phase. As well as finalising the process with the permanent plug and cap.

The unique test plug controls the flow of air and water by a simple quarter turn relief valve eliminating injuries to the wrists, hands and fingers, therefore directly improving business efficiency of safety, time and money. An additional feature of the test plug is the pneumatic functionality allowing for accelerated air testing opportunities. This revolutionised and award winning product was developed in Australia, and is fully accredited to BS 1329 in the UK. At Anglo Nordic, we are proud to be the chosen UK distributor.

PRODUCT RANGE

K-Valve standard inspection and test opening

K-Valve 110mm Test Plug

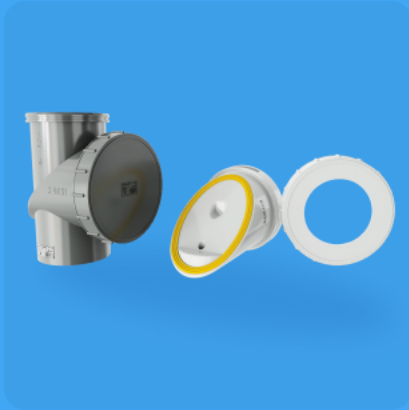

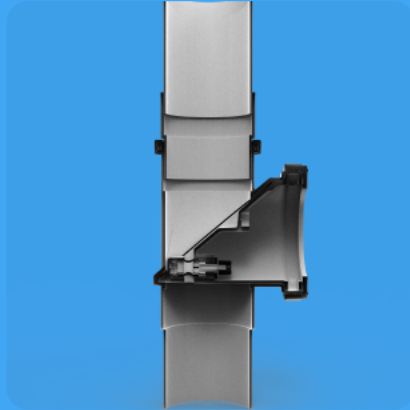

TEST PLUG

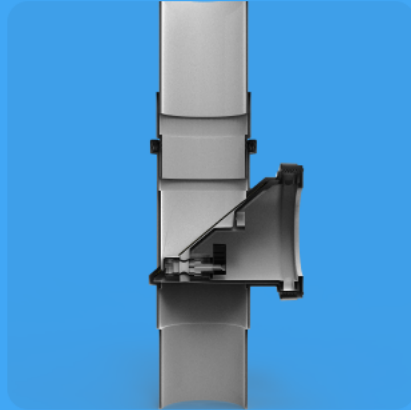

HOW IT WORKS

Install the K-Valve into the required position and insert the K-Valve 110mm Test Plug and Test Cap.

The K-Valve 110mm Plug in the test position holding air at a static pressure.

The K-Valve 110mm Plug relieves the air test through the quarter turn relief valve.

Once testing phase is complete, remove the Test Cap and the K-Valve 110mm Test Plug.

Install the insert piece and Permanent Cap.

Tighten the cap and you are DONE!
